צורת מינון: SOLUTION FOR INJECTION/INFUSION

התוויה כפי שאושרה בתעודת הרישום:

- * As the sole anaesthetic agent for diagnostic and surgical procedures.
When used by intravenous or intramuscular injection, Ketamine PropHarm 10mg/ml is best suited for short procedures. With additional doses, or by intravenous infusion, Ketamine PropHarm 10mg/ml can be used for longer procedures. If skeletal muscle relaxation is desired a muscle relaxant should be used and respiration should be supported.
 - * For the induction of anaesthesia prior to the administration of other general anaesthetic agents.
 - * To supplement other anaesthetic agents.
- Specific areas of application or types of procedure: When the intramuscular route of administration is preferred.
- * Debridement, painful dressings and skin grafting in burned patients as well as other superficial surgical procedures.
 - * Neurodiagnostic procedures such as pneumoencephalograms, ventriculograms, myelograms and lumbar punctures.
 - * Diagnostic and operative procedures of the eye, ear, nose and mouth including dental extractions. (Note: eye movement may persist during ophthalmological procedures).
 - * Anaesthesia in poor-risk patients with depression of vital functions or where depression of vital functions must be avoided if at all possible.
 - * Orthopaedic procedures such as closed reduction, manipulation femoral pinning, amputations and biopsies.
 - * Sigmoidoscopy and minor surgery of the anus and rectum, circumcision and pilonidal sinus.
 - * Cardiac catheterization procedures.
 - * Caesarian section: as an induction agent in the absence of elevated blood pressure.
 - * Anaesthesia in the asthmatic patient, either to minimise the risk of an attack of bronchospasm developing or in the presence of bronchospasm where anaesthesia cannot be delayed.
